Research Projects:

---- Robot-Assisted Dressing for Bedridden Patients

- We present a data-efficient supervised deep neural network to learn garment grasping points.
- We introduce a precise, real-time, user posture tracking method based on a probabilistic filter using multi-modal (vision and haptic) information.
- We propose a low-dimensional user model that captures the specificities of different upper-body impairments for personalized dressing assistance.
- The above works have been published in [Science Robotics](#) (impact factor: **23.75**), [IEEE Transactions on Robotics](#) (impact factor: 9.72), ICRA, IROS (top conferences in robotics).
- The above works have been covered by several news outlets, including [The Times](#), [Bloomberg](#), Daily Mail, Telegraph, South China Morning Post, IndustryWeek, Chinese Association Artificial Intelligence etc.
- The above works are supported in part by a Royal Academy of Engineering Chair in Emerging Technologies.

---- Preoperative Planning for Multi-Arm Surgical Robots

- We design a new PSO-GP-based optimization strategy, an integrated method of Particle Swarm Optimization (PSO) and Gaussian Process (GP), to optimize the preoperative port position and robot arm positioning.
- This method provides guidelines for surgeons to perform an efficient intervention with the use of the multi-arm surgical robot system.
- The above works have been accepted to several conferences and journals (ICRA, ICMA, Proceedings of the Institution of Mechanical Engineers, Part C: Journal of Mechanical Engineering Science).
- The above works have received [Best Student Paper Award](#) at IEEE International Conference on Mechatronics and Automation (ICMA), 2016.
- The above works have received [Best Msc Thesis Award](#) at Harbin Institute of Technology, 2016.

---- Under-Actuated In-Hand Manipulation

- We design a planar under-actuated gripper with two three-phalanx fingers.
- We use Gaussian Processes to compensate the kinematics error of the under-actuated planar gripper.
- The above works have been published in IROS (top conference in robotics).
- The gripper has been implemented on a mobile robot in extreme environments.
