Research Projects:

---- Robot-Assisted Dressing for Bedridden Patients

- We develop a robot-assisted dressing pipeline intended for paralyzed people.
- We present an active pre-grasp garment manipulation approach with deep contrastive neural network in a sim-to-real manner.
- We introduce a precise, real-time, user posture tracking method based on a probabilistic filter using multi-modal (vision and haptic) information.
- We propose a low-dimensional user model that captures the specificities of different upper-body impairments for personalized dressing assistance.
- The above works have been published in top journals and conferences: **Science Robotics**, **IEEE Transactions on Robotics**, ICRA, IROS.
- The above works have been covered by several news outlets, including The Times, Bloomberg, Daily Mail, Telegraph, South China Morning Post, IndustryWeek, Chinese Association Artificial Intelligence, TexhXplore, New Scientist, etc. Live demo for NHS, ABB, Apple, MURI, etc.

---- Preoperative Planning for Multi-Arm Surgical Robots

- We design an integrated method of Particle Swarm Optimization and Gaussian Process to optimize the preoperative port position and robot arm positioning.
- This method provides guidelines for surgeons to perform an efficient intervention with the use of the multi-arm surgical robot system.
- The above works have been accepted to ICRA, ICMA conferences, and Proc. Inst. Mech. Eng. C journal.
- The above works have received **Best Student Paper Award** at IEEE International Conference on Mechatronics and Automation (ICMA), 2016.

---- Under-Actuated In-Hand Manipulation

- We design an under-actuated gripper with two three-phalanx fingers for mobile robot in extreme environments, and use Gaussian Processes to compensate kinematics errors (Published in IROS).
